SUMMARY

Second-year B.Tech CSE student building **full-stack and AI-powered products end to end** — from architecture to deployment. Comfortable across React, Next.js, Node.js and PostgreSQL, with hands-on experience in LLM-driven automation.

SELECTED PROJECTS

KrishiSetu — Direct Mandi & Fair Buyer Gateway · Team project [GitHub ↗](#)
Next.js · Prisma · PostgreSQL

- Owned full-stack engineering and architecture for an agritech platform that **cuts mandi queue delays and payment-default risk** for farmers selling to institutional buyers.
- Built **26 routes** and **8 data models**; escrow-style payments (**30% advance / 70% final**) and trust logic with an automated suite (**8/8 passing**). Bilingual EN/HI prototype on mock data.

Weblris — AI-Powered Browser Agent [GitHub ↗](#)
React · Node.js · Playwright · Gemini Vision · Supabase

- Turns natural-language instructions into browser actions through a **perceive → reason → validate → act → verify** loop.
- Every action validated against the live page snapshot before execution; **10-step run cap**, full audit trail in Supabase, **JWT + bcrypt** authentication.

GyanSetu — Offline Rural Learning PWA [GitHub ↗](#)
React 19 · TypeScript · Workbox

- Offline-first PWA for **grades 5–8** students on low-bandwidth devices: 4 grades, 5 subjects, EN/HI, quizzes, badges and certificates.
- On-device progress, read-aloud and low-bandwidth mode built for **2G/3G** connections.
